

Project Services, LLC

Company Overview

If your plant always suffers through the difficulties of planned downtime, consider working with Project Services, LLC — we make shutdowns, turnarounds, and outages run smoothly. Our goal is to provide you with safe, accurate, and responsible service. Our staff is comprised of veteran tradesmen and mill workers, most proudly boasting upwards of 30 years in the industry. We will learn and enforce your safety policies and procedures while managing your project within your time and budget constraints.

The same management capacities that keep various production facilities running during regular operations with a skeleton crew do too little to coordinate the hundreds of extra maintenance personnel and expanded working hours that come with an outage. This temporary chaos, while ultimately productive, can be quite overwhelming. Ensuring that a shutdown, turnaround, or outage remains safe and efficient requires certain management capabilities that some mills lack in-house.

We are a business specializing in Project Management, Contract Management, Scheduling, and Planning. In recent years, Project Services has also assisted with plant expansions and installations by overseeing and scheduling fabrication projects. We bring expertise working with boilers (of the package, power, and recovery varieties), pressurized tubing, paper machines, turbines, lime kiln, and pulp.

What started as a small business grew over time by personalizing and customizing our services. Even though we are larger now, we still value each of our clients like they're the only one we've got.

Capabilities

PROTECTING YOUR #1 INVESTMENT

STAYING SAFE

Project Services offers a wide range of capabilities related to shutdowns, turnarounds, and outages (however you refer to them). These services generally fit into contract management, project management, planning, or scheduling categories.

We are thoroughly experienced in working with the equipment part and parcel of any industrial facility: recovery boilers and paper machines, pressurized tubing and lime kilns, pulp machines, and power boilers. Our proficiency with these enables us to provide auditing services for quality assurance and preventative maintenance purposes. Our record shows that we have completed these tasks safely. Experience and routine usage of best practices is our policy, and it shows.

Project Services makes our industry experts available for both short-term jobs and long-term engagements to provide the most comprehensive solution to all of our clients' needs.

FIGHTING DELAYS WITH PREPARATION

SAFETY TRAINING

In addition to boosting the effectiveness of the shutdown, our team works to ensure the safety of inspection and maintenance personnel. Project Services retains a safer than average workers' compensation modification rate because of our dedication to safety on the job site. Furthermore, we have maintained an A rating with ISNet since registering in 2013.

Our company achieves this through rigorous safety training. While our field personnel immerse themselves in the safety measures unique to each client, they also implement industry best practices. We also offer in-house safety training and facility-specific safety compliance training to promote jobsite safety.

We know that BEING SAFE is never an ACCIDENT!

EXPERTISE AND PROFESSIONALISM

HERE TO HELP

Clients can make use of our employees' varied expertise on a sundry of subjects such as:

We currently serve Pulp, Paper, Power, and Production clients throughout the Southern and East Coast of the United States... but new capabilities are continually expanding our client base — **STAY TUNED!**

GETTING IT DONE

MANAGING

The same management capacities that keep various production facilities running during regular operations with a skeleton crew do too little to coordinate the hundreds of extra maintenance personnel and expanded working hours that come with an outage. Project Services implements management solutions at every level — from quality assurance to contractor management, and all the way up to project management, our personnel ensure the work gets completed the right way.

CONDUCTING OUTAGE NOISE INTO A SYMPHONY

SCHEDULING

Effectively coordinating concurrent projects without impacting productivity requires building and maintaining a comprehensive schedule; Project Services employs intermediate and master schedulers dedicated to this task. These logistics experts organize inspection and maintenance itineraries to keep work flowing and thus decrease overall downtime. Their ability to consolidate the numerous contractor agendas into a single master schedule provides project managers with a bird's-eye view of happenings throughout the jobsite.

LAYING A STRONG FOUNDATION

PLANNING

The planning process begins months before planned downtime ever begins. A smooth, safe outage, in fact, begins with the planner establishing the scope. These experienced individuals account for man-hours, parts, and supplies as they develop the schedule. Exceptional planning, such as the kind Project Services offers, directly contributes to a well-managed budget and well-managed resources. We can provide these services for your production facility as well.

ATTENTION, EXPERIENCED PAPER MILL PROFESSIONALS:

Many of our employees are retired mill workers who can boast decades of service. Others are veteran tradesmen that have worked in both production and power generation facilities. Project Services recognizes that this kind of expertise is irreplaceable on the outage site. The current industrial landscape needs tenured individuals to guide and manage inexperienced technicians.
